

BRIGHT

Six high-powered, energy efficient light-emitting diodes (LEDs) bring focused light anywhere you need it.

COST EFFECTIVE

Solar powered LED lighting means there's never a utility bill, no need to run costly underground conduits to an electrical supply and no need to change bulbs.

CARBON NEUTRAL

Since no utility connection is required, these lights require no fossil fuels to operate and are safe for the environment.

High Power Solar Sign Lights

- Completely powered by the sun. No utility bills!
- No need to run a conduit from the sign to an electricity supply.
- The battery charges during the day and the light turns on automatically at night.
- Separate battery box, spotlight and solar panel connected with standard wiring for optimal placement of all components.
- Built-in timer allows for light to be shut off 2, 4, 6 or 8 hours after turning on.

Light your sign. Save the planet. Save money.

Energy Bazaar's solar-powered sign lights free you from the costly need to bring electrical wiring from your business or utility pole by locating a solar power system near your sign. Its powerful 12 volt, 7 amp-hour battery stores more than enough energy to keep the highly efficient six-watt LED spotlight shining on your sign all night.

With a high-efficiency solar panel and sophisticated charge controller, you get optimal benefit from the sun in charging the system. It senses when the sun goes down, and automatically turns on to light your sign. Optionally, you can program the light to turn off at a specified time during the night.

Requiring no electrical hookup, bulb replacement or switching on and off every day, the system is inexpensive to operate and virtually maintenance-free.

Everything You Need

Energy Bazaar's solar sign light includes everything you need to reliably and economically light your sign:

- High-output solar panel to harness the power of the sun.
- Powerful 12 volt, 7 amp-hour battery.
- Sophisticated charge controller, including a light timer that manages charging the battery and activating the light at night.
- Bright, highly efficient LED spotlight (two spotlights included with our double-sided model)

You only need to add mounting hardware to match your sign's specific installation requirements.

Specifications

- 12 volt, 6 watt bright white LED spotlight designed to light a sign up to 6'x8'. (Double-sided sign kit lights are 5 watts each.)
- Solar panel nominal power output: 10 watts. MPP voltage: 17.5 volts, MPP current: 0.57 amps.
- Solar panel dimensions: 14"x12"x1.25"
- Charge controller rated load: 12 volts at 10 amps.
- Operating temperature: -20°F to 120°F.
